Investing in the Lagoon Masters and SewperRx Microbes proved to be money well spent.

The Lagoon Masters are constructed with either stainless steel or coated aluminum frames, depending on the amount of industrial influence, and are built for decades of service life. They are powered by (2) two horsepower regenerative blowers and produce over 15 pounds of dissolved oxygen per hour. AO3 Solutions selected the Lagoon Masters because of their energy efficiency. On average AO3 Solutions saves their clients 83% of energy consumption by replacing or installing Lagoon Masters over vortex or paddle aerators. Furthermore, the Lagoon Masters don't require maintenance, other than changing the stainless-steel air filters, since there are no moving parts.
